Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 10-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Morimoto et al (US 5,055,663). Morimoto et al teaches a method for correcting an optical beam for correcting an optical beam for spherical aberration in a scanning imaging system as received, the method comprising receiving the optical beam from an external source; and correcting the received optical beam for spherical aberration (see col. 9, line 68 – col. 10, line 3; Fig. 1). As shown in Fig. 1, the beam goes through a plurality of lenses that is afocal. There is a flat plate prior to focusing on a target object (see Table 9, r13-r14). The optical beam received and outputted by the plurality of lenses is collimated and the same diameter (see col. 6, lines 26-40). The lenses have various concave and convex surfaces.

Allowable Subject Matter

Claims 6-9 and 15-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach or suggest a scanning imaging system as recited in claims 1 and 10, where the received optical beam is transformed into an annulus.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Saito et al (US 2002/0105628) is cited to show another scanning system that corrects for spherical aberration.
